

### Problema 1

```
import java.util.Scanner;
public class Problema1 {
    public static void main(String[] args) {
        Scanner sc=new Scanner(System.in);
        int min=sc.nextInt();
        int h=sc.nextInt();
        int t=h*60+min;
        System.out.println("timpul este "+t+" min");
        sc.close();
    }
}
```

### Problema2

```
import java.util.Scanner;
public class problema2 {
    public static void main(String[] args) {
        Scanner sc=new Scanner(System.in);
        int a=sc.nextInt();
        int b=sc.nextInt();
        double s=Math.pow(a, 2);
        double k=Math.pow(b, 2);
        double l=Math.sqrt(s+k);
        System.out.println("ipotenuza este "+l);
        sc.close();
    }
}
```

### Problema 3

```
import java.util.Scanner;
public class Problema3 {
    public static void main (String[] args) {
        Scanner sc=new Scanner(System.in);
        double k,s,c;
        k=sc.nextDouble();
        s=sc.nextDouble();
        c=(k*100)/(100-s);
        System.out.println("Cantitatea de fructe procurate "+c+" kg");
        sc.close();
    }
}
```
